

# 2018 WERC Design Contest FAQ

[werc@nmsu.edu](mailto:werc@nmsu.edu)

## Track 3: Internet of Things (IOT) for Environmental Applications

### Task 4: Wearable Air Pollution Sensors that Would Crowd Source Pollution Hot Spot Data

**Q: Do we actually have to use Bluetooth or if we could use another wireless platform?**

**A:** You can use any other wireless way-- It is not restricted to Bluetooth.

**Q: "At the end of each session, the collected data is sent to a website, where the data is crowd sourced with data from other users to generate heat maps indicating where pollutant concentrations are highest and lowest." We want to know what the definition of a session is in this case. Is it a certain period of time? Do we determine this value or is it given to us?**

**A:** Each session means each period of time (you can identify the time according to your design). There is no given value.
