

NEW MEXICO STATE UNIVERSITY S-STEM PROGRAM
(Scholarships in Science, Technology, Engineering, and Mathematics)
STUDENT INFORMATION DISCLOSURE STATEMENT

I understand that to track the progress of students and to evaluate program effectiveness, the S-STEM Project requires access to student information. Such information may include (current and past) academic standing, course enrollment records, grades, attendance, academic progression records, and placement scores. This information may be requested from instructors, previously attended schools and colleges, institutional records, mentors, tutors, and/or the New Mexico Higher Education Department. Follow up data on workforce participation is also important for tracking program outcomes. Workforce participation data are generally collected through follow up surveys and phone contact.

The S-STEM Project is required to report individual student data to the National Science Foundation including ethnicity, GPA, and enrollment status. This information is also used to study student transfer, retention, progression, and graduation.

I authorize the release and use of personal information, as described above, to the S-STEM Project. I am willing to participate in program follow-up activities (e.g., surveys and phone calls) and focus groups, and will make efforts to provide contact information, as requested. I understand that this information is to be used solely for evaluating the impact and effectiveness of the S-STEM Project and that individual data will not be released to parties other than those directly involved with program evaluation. I also authorize any photos of me to be used on S-STEM websites, presentations and publications used to promote and disseminate the program, its activities, and associated outcomes.

By providing this cell phone number and checking this box, I give permission to S-STEM staff and faculty to send me text messages to the following number (include area code):
